CC Docket No. 97-250

**ERRATA TO DIRECT CASE OF THE SBC COMPANIES**

Southwestern Bell Telephone Company (SWBT), Pacific Bell, and Nevada Bell (collectively, the SBC Companies), hereby file this errata to their direct case filed on January 27, 1998 in the above styled docket. Because of data entry errors recently discovered, the SBC Companies respectfully request that the Commission substitute the attached corrected Appendix B for the one submitted with the direct case. In this errata the SBC Companies also adjust Appendix B based upon a clarification received from Commission staff on April 2, 1998. The new Appendix B also briefly explains why the results of the calculations for Pacific Bell differ from SWBT.

Respectfully submitted,

SOUTHWESTERN BELL TELEPHONE COMPANY  
PACIFIC BELL  
NEVADA BELL

## PART II. LINE COUNT DATA IDENTIFICATION

### Sequence of Search

A0, C1

(A0) The following is the criteria that SWBT used in determining whether a residential lines is primary or nonprimary. A line is considered a primary residential line if the customer's account record contains a customer type of "11". In addition, a customer type of "12" is considered non-primary if the account record denotes a customer type of "12" and the Additional Line Field Indicator (ADL FID) is "1".

A "1" in the first field of the customer type indicates a single line residential customer. A "2" in this field indicates a multiline arrangement or a group-billed account.

The ADL FID is populated with a "0" if no ADL FID is associated with the line and a "1" if an ADL FID indicator is associated with the line. The ADL FID indicator is populated with a "1" for any line in a single-family living unit after the first line.

(C1) The state was identified based on the Billed Telephone Number (BTN) to enable SWBT to identify which state.

SWBT does actively pursue consolidated residential billing. In other words, SWBT encourages customers to 'bill on' new residential lines to existing residential accounts. This would lead to a higher relationship of nonprimary lines to total residential lines.

**Example based on SWBT's criteria:**

<u>Customer</u>	<u>Location</u>	<u>Account Number</u>	<u>Customer Type</u>	<u>ADL FID</u>	<u>NonPrimary (N) or Primary (P)</u>

## PART II. LINE COUNT DATA IDENTIFICATION

### Sequence of Search

A0

No other criteria was required since only one state.

(A0) The following is the criteria that Pacific used in determining whether a residential lines is primary or nonprimary. A line is considered a *primary residential line* if the customer's account record contains a customer type of "11". In addition, a customer type of "12" is considered non-primary if the account record denotes a customer type of "12" and the Additional Line Field Indicator (ADL FID) is "1".

A "1" in the first field of the customer type indicates a single line residential customer. A "2" in this field indicates a multiline arrangement or a group-billed account.

The ADL FID is populated with a "0" if no ADL FID is associated with the line and a "1" if an ADL FID indicator is associated with the line. The ADL FID indicator is populated with a "1" for any line in a single-family living unit after the first line.

Pacific does not actively pursue consolidate residential billing. In other words, Pacific does not encourage customers to 'bill on' additional residential lines to existing residential accounts. This could lead to a smaller number of nonprimary lines when compared to total residential lines.

**Example based on Pacific's criteria:**

<u>Customer</u>	<u>Location</u>	<u>Account Number</u>	<u>Customer Type</u>	<u>ADL FID</u>	<u>NonPrimary (N) or Primary (P)</u>
Jane Doe	123 Cherry St.	555-1234	12	0	P

No other search criteria required for residential lines as only one state involved.

(A0) The following is the criteria that Nevada used in determining whether a residential line is primary or nonprimary. A line is considered a primary residential line if the customer's account record contains a customer type of "11". In addition, a customer type of "12" is considered non-primary if the account record denotes a customer type of "12" and the Additional Line Field Indicator (ADL FID) is "1".

A "1" in the first field of the customer type indicates a single line residential customer. A "2" in this field indicates a multiline arrangement or a group-billed account.

The ADL FID is populated with a "0" if no ADL FID is associated with the line and a "1" if an ADL FID indicator is associated with the line. The ADL FID indicator is populated with a "1" for any line in a single-family living unit after the first line.

Nevada Bell does not actively pursue consolidated residential billing. In other words, the search criteria discussed in AO above enabled the identification of 'billed on' or nonprimary residential lines. Nevada Bell does not presently request customers to add additional lines to existing customer accounts.

**Example based on Nevada's criteria:**
